

June 3, 1999. I think you should be authorized to remove some OTC products that are potentially dangerous.

Aspirin containing carnauba wax (floor wax).

Aspirin, enteric-coated ^{3804 '99 JUN 17 12:41} coating did not disintegrate, in my G.I. tract.

Coating on apples and tomatoes: "food grade" toxins.

I copied this info. from the label on the packaged tomatoes: "food grade vegetable, petroleum, beeswax, and/or lac-resin-based wax, or resin to maintain freshness".

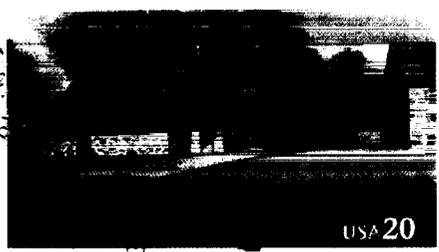

You would not eat any of these coatings. In my experience, not occurred be-

92N-0139

C5574

neath the coating. I peeled
the apples and poured
boiling water over the to-
matoes, then removed the
skins. I don't think you need
to do an LD-50 to prove
toxicity. Sincerely,

(Mrs.) B. Barras James
